- constallation lines minimum thickness?
- constallation lines continuation, should they all finish before the stars?
- circle stars size?
- minute line thickness?
- hours dots size?
- treatment of hour zones divisions?
- treatment of clock centre - earth?

boundary surface, should it be cirzular or is it easier to be polygon?

is it becoming to big the clock, maybe we can try to scale the constallations and place them closer to the middle (it really depends of the line thickness minimum and star size minimum we can achieve.

overhanging edge maybe is too small now and not hiding enough?
